Dear Helcim Hiring Team,

I'm excited to apply for the Senior Software Engineer role on your accounts payable team. Over 9+ years I've built and scaled backend systems in PHP/Laravel and Node.js/Django, most recently modernizing an API layer and database performance for a platform handling tens of thousands of active orders — indexing and rewriting queries to cut load times, building fault-tolerant job tracking for automated workflows, and shipping through Docker, Kubernetes, and CI/CD pipelines.

What draws me to this role is the scope: owning the full accounts payable lifecycle and its direct impact on Helcim's vendor and partner relationships. I work well cross-functionally, enjoy mentoring junior developers, and would welcome the chance to bring that backend depth to your team.

Sincerely,
Hieu Tran
