EMPLOYMENT

Full Stack Developer - Danihel Group

Alberta, Canada

Dec 2023 – Aug 2026

- Reduced load times on high-traffic store endpoints for ~1,700 users, by introducing database indexing, rewriting inefficient ORM queries, and decoupling synchronous logging from the request path.
- Improved scheduled-job reliability across ~15 automated workflows, by building a database-backed job-tracking system that logs status and cleans up orphaned jobs.
- Prevented invalid state transitions across ~43,000 active orders, by refactoring lifecycle-stage entity relations to use stable alias IDs and adding state-machine guards.
- Modernized client-server communication, by migrating the mobile app's API integration to a NestJS backend and optimizing background geolocation sync frequency.

Full-stack Developer - Cynopsis Solutions

Singapore

Sep 2020 – Mar 2022

- Reduced deployment time by 50%, by designing, building, and managing an automated AWS CodePipeline process that compiles source code and streamlines builds and releases.
- Cut client processing time to 15 minutes, by automating deployment and configuration with Jenkins jobs and an aws-cdk script that provisions CloudFormation, CloudFront, Route 53, EC2, and RDS resources.
- Reduced data duplication across 45 enterprise clients, by designing a multi-tenant database structure and applying design patterns in a new Django-based platform version.
- Kept the existing platform performant and scalable, by maintaining and optimizing its ExpressJS and GraphQL services.

Full-stack Developer - Oursky Limited

Hong Kong

Jan 2020 – Aug 2020

- Accelerated scalability and flexible infrastructure management, by managing releases and deployments to AWS with Docker and Kubernetes.
- Reduced bug occurrences by 20%, by conducting thorough code reviews and giving constructive pull request feedback.
- Streamlined content population, by developing Django RESTful APIs and extending a Wagtail CRM.

Full-stack Web Developer - Construct Digital

Singapore

Aug 2016 – Jan 2020

- Reached a 3-second load time and 85+ Google PageSpeed score, by implementing caching and Webpack asset optimization on WordPress themes built from scratch.
- Improved release smoothness and code quality, by conducting code reviews, managing pull requests, resolving conflicts, and deploying updates to servers.
- Cut development time by 30%, by building reusable components in Vue.

SKILLS

- CI/CD & Release Automation: AWS CodePipeline, Jenkins, automated build and deployment pipelines, Git
- Infrastructure as Code: aws-cdk, CloudFormation, reproducible and parameterized environments
- Containers & Cloud: Docker, Kubernetes, AWS (EC2, RDS, CloudFront, Route 53)
- Backend: Python, Django, Node.js, ExpressJS, RESTful APIs, GraphQL
- Performance & Reliability: Query and index optimization, bottleneck diagnosis, scheduled-job monitoring, refactoring legacy code
- Databases: PostgreSQL, MySQL, DB2

EDUCATION

Ho Chi Minh City University of Technology

Bachelor of Engineering in Computer Science

Awarded in 2017
